Art Unit: 2441

DETAILED ACTION

Claim Objections

Claim 17 is objected to because of the following informalities:

Claim 17 (dependent upon claim 1) is almost identical to claim 5 (dependent upon claim 1).

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 recites the limitation "communication network" in lines 1 - 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2441

2. Claims 1 – 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Anderson et al. (U.S. Pat. No. 6,233,332) (System For Context6 Based Media Independent Communications Processing).

2.1 Regarding claim 1, Anderson discloses a method of establishing communication between an information source defined by a data processing system and a user accessing the information source with a data processing device via a communications network, the method comprising:

assigning a position in a queue to the user according to one or more rules (Figs.

4, 5; col. 7, line 23 – col. 8, line 4 "**Entitlement Data** 405"; col. 8, lines 5 – 47);

determining contact information relating to the user which enables an agent to contact the user (col. 7, line 23 – col. 8, line 4); and

establishing communication between an agent and the user at the head of the queue using the contact information (Figs. 4, 5; col. 7, line 23 – col. 8, line 4);

characterized in that

at least one rule relates to the use of the information source by the user, the method further comprising monitoring the interaction of the user with the information source, one or more of the rules using the monitored interaction with the information source to assign a position in the queue to the user, wherein the information source is a Web server and the user accesses the information source using a Web browser (Figs. 4, 5; col. 7, line 23 – col. 8, line 4; col. 8, lines 5 – 47 "the calling customer is served in true order of arrival fashion (or any other queuing algorithm desired), ...").

Art Unit: 2441

- 2.2 Per claim 2, Anderson teaches monitoring information received from the user, one or more of the rules using the information received from the user to assign a position in the queue to the user (Figs. 4, 5; col. 7, line 23 col. 8, line 4; col. 8, lines 5 -47).
- 2.3 Regarding claim 3, Anderson discloses that the monitored interaction with the information source includes one or more of, the time spent by the user accessing the information source, how frequently the user has accessed the information source, and specific information accessed by the user (Figs. 4, 5; col. 7, line 23 col. 8, line 4).
- 2.4 Per claim 4, Anderson teaches monitoring the usage of the information source by the user, and reordering the queue so as to be in accordance with the rules (Figs. 4, 5; col. 7, line 23 col. 8, line 4; col. 8, lines 5 47).
- 2.5 Regarding claim 5, Anderson discloses that the communication network is a WAN, LAN, PSTN, or the Internet (col. 6, lines 25 39 "LAN/WAN" "PTSN" "TCP/IP").
- 2.6 Per claim 6, Anderson teaches that the contact information is in the form of a telephone number, WAN address, LAN address, email address or TCP/IP address (col. 6, lines 25 39).

Art Unit: 2441

2.7 Regarding claim 7, Anderson discloses that the user provides the contact information to the information source prior to accessing the information source (col. 7, line 23 - col. 8, line 4; col. 8, lines 5 - 47).

- 2.8 Per claim 8, Anderson teaches that the instruction data are transferred from the Web server to the data processing device of the user and wherein the instruction data instruct the data processing device to provide contact or monitoring information to the information source (Figs. 4, 5; col. 7, line 23 col. 8, line 4).
- 2.9 Regarding claim 9, Anderson does not explicitly disclose that the instruction data are in the form of an applet.

However, the use of applet to gather specific information is inherent in the art.

2.10 Per claim 10, Anderson does not explicitly teach that the information used by at least one of the rules is communicated between the Web server and the Web browser in the form of a cookie.

However, the use of cookies to gather specific personal information is inherent in the art.

2.11 Regarding claim 11, Anderson discloses that the contact information is used to establish communication between the agent and the user while the user continues to access the information source (col. 8, lines 5 - 48).

Art Unit: 2441

2.12 Regarding claims 12 - 17, the rejection of claims 1 - 11 under 35 USC 102(e)

(paragraphs 2.1 – 2.11 above) applies fully.

Response to Arguments

Applicant's arguments with respect to claims 1 - 17 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth R. Coulter whose telephone number is 571 272-3879. The examiner can normally be reached on M - F, 7:30 am - 4 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rupal Dharia can be reached on 571 272-3880. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
